DNA encoding osteoclastogenesis inhibitory factor protein - useful	one resorption control, esp. treatment of osteoporosis	Page 61; 183pp; Japanese.	Sequences given in R99921-23 and R9992b represent iragments or	the OCIF has a molecular weight by SDS-PAGE of 60 kD under reducing	conditions and 120 kD under non-reducing conditions. The protein is			lost after 10 Mins at 90 meg.c. Other is useful in the control of bone resorption and therefore in the treatment and prevention of	of bone resorption, e.g. osteoporosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 59, Page 115-116; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-DDD2 in which amino acids 253-326 of the mature OCIF protein are deleted. The OCIF of the invention on and 120 Kb under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 70 deg.C or 10 mins at 20 deg.C. OCIF is useful in the control of bone resorption and therefore
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                R99941;

                                                                                                                                                                                                                                                                                              DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 65; Page 119-121, 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-CC in which amino acids 331-380 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. or 30 mins at 56 deg.C. and is lost after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mutated OCIF, OCIF-DCR4. for bone resorption control, esp. treatment of osteporosis

Claim 47; Page 107-109; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-DCR2 in which amino acids 43-84 of the mature OCIF protein are deleted. The OCIF of the invention and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. and 05-C. and 05-
                                                                                                                                                                                                                                                                                                                                                                   osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-DCR4 in which amino acids 123-164 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. or 30 mins at 56 deg.C. and is lost after 10 mins at 70 deg.C. ocif is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           23-APR-1997 (first entry)

Page 109-111; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-DCR3 in which amino acids 85-122 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto action-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.c. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0

```
for bone resorption control, esp. treatment of osteoporosis.

Claim 44: Page 105-107; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents oCIF-DCRI in which amino acids 2-42 of the area of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-DCRI in which amino acids 2-42 of the macure OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions. The protein is adsorbed onto action-exchangers or hepzin and its activity is lowered after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the example of the control of bone resorption and therefore in the example of the control of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            22-APR-1997 (first entry)
Mature osteoclastogenesis inhibitory factor.
Osteoclastogenesis inhibitory factor; OCIF; heparin; bone resorption;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         In the encoding osteoclastogenesis inhibitory factor, protein - useful for bone resorption control, esp. treatment of osteoporosis claim 6; Page 62-64; 183pp; Japanese.

This sequence represents the mature osteoclastogenesis inhibitory factor (OCIF) of the invention. The OCIF has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 10 mins at 56 deg.C., and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                          DNA encoding osteoclastogenesis inhibitory factor protein - useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

T for treating e.g. tumnurs, infection, auto:immune disease, graft rejection cytotoxicity or inflammation.

Claim 14: Fig. 15pp: English.

Claim 14: Fig. 15pp: English.

C The receptor binds to TNF, and in particular, TNF-beta.

The receptor may be used for screening for antagonists and agonists of the receptor and for ligands for the receptor. Such agonists of the receptor and for ligands for the receptor. Such agonists may differentiation, to mediate the immune response and anti-viral response, to requiate growth and provide resistance to certain infections. The antagonists may be used therapeutically, to treat untoimmune diseases, inflammation, septic shock, to inhibit graft.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   National 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 1931: 193
                        osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-CBst in which Gln 371 is substituted by sequence represents OCIF-CBst in which Gln 371 is substituted by the and and maino acids 373-380 of the mature OCIF protein are deleted. These changes are caused by the introduction of a restriction site in the bwa encoding this protein. The OCIF of the invention has a molecular weight by SD-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg. C. and Mins at 56 deg. C. and is lost after 10 mins at 70 deg. C. ocif is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mutated OCIF, OCIF-CL.
Osteoclastogenesis inhibitory factor; OCIF; heparin; bone resorption; osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

                                                                                                                                                                                                                                                                                    DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 38; Page 100-102; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-C22S in which the 27nd Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg. C ocif is useful in the control of bone resorption and therefore in the control of bone resorption and therefore the control of bone resorption and therefore the control of the control of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-C20S in which the 20th Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 41, Page 103-105, 183pp; Japanses.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-C23S in which the 23rd Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-C21S in which the 21st Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the control of bone resorption of disorders of bone resorption, e.g.

DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis Claim 29; Page 94-96; 183pp; Japanese.
This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-C19S in which the 19th Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis Disclosure; Page 64-66; 183pp, Japaneso.

This sequence represents the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. The OCIF has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     22-APR-1997 (first entry)
Full length osteoclastogenesis inhibitory factor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                          DNA encoding alternatively spliced prostate-specific membrane antigen - useful to develop prods. for detecting haematogenous micrometastic tumour cells, or prostate cancer progression Example 1; Page 49; 284pp; English.

Tryptic peptides (W02237-45) were obtd. from the human prostate-specific membrane (PSM) antigen (see also W0224) and used to design primers (T36795-808) utilised in the isolation of a CDNA clone (T36785) coding for PSM; primers I-L (T36801-04) are based on amino acids 14-19 of peptide 2T4 (W02241). The isolated CDNA and PSM protein are useful in developing methods for the diagnosis and treatment of prostate cancer and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Prostate-specific membrane antigen peptide fragment.

Prostate-specific membrane antigen; PSM, prostate cancer;
transmembrane glycoprotein; imaging; targeting; tumour detection;
antibody detection; sequencing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Fair WR, Heston WDW, Israeli RS;
WPI: 94-167129/20.
Prostate-specific membrane antigen and DNA encoding it - is useful for detecting haematogenous micro-metastatic tumour cells and for identifying ligands which bind to PSM Ag Example; Page 46; 196pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ..

Pramine acid sequence of the human auxillary cytochrome P450 species

Crafe. The cDNA was amplified by PCR using the primers 0877514. The

product was cloned into the yeast expression vectors pAAHSN or pARRR to

crafe product the vectors p2A6 for the expression of the cytochrome P450 alone

or p2A6R for co-expression with the yeast NADPH-P450 reductase.

Crompound by reacting the chemical compound with recombinantly produced

compound by reacting the chemical compound with recombinantly produced

compound by reacting the chemical compound with recombinantly produced

compound by an exist NADPH-P450 reductase, either as a fused protein or

(087718-32), and yeast NADPH-P450 reductase, either as a fused protein or

in cellextracts, and analysing the resulting metabolite to assess the

safety of the chemical compound, or its metabolite, will be converted into

a carcinogenic or mutagenic form through metabolism in the liver.
The inventors attempted to sequence the PSM Ag by modified Edman degradation. Peptides (R55098-107) that gave clear dominant peaks on HPLC from the digested PSM Ag sample were used. Some of the residues were unidentified, and others were present at very low levels and identified with lower confidence. Some of these peptides were used to design primers to carry out PCR to identify cDNA clones were used to design primers to carry out PCR to identify cDNA clones cancoding the PSM Ag. R55102 was used to design primers 65527-30.

A clone, IN-20 was identified as a partial PSM sequence.

The full PSM Ag sequence is shown in R55097 and is encoded by 065520. The PSM coding sequence is useful for suppressing or modulating the metastatic ability of prostate tumour cells to grow, or for eliminating them. The protein is useful to identify or purify ligands of the Ag. It is also an attractive target for Ab-directed in imaging and targeting of prostatic tumour deposits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô

                                                                                                                                                                                                                                                                                                                                                For a variant of safety of a chemical cpd. - using recombinant yeast expressing human cytochrome p450 and a yeast NADPH-P450 reductase Examples; page 53-55, 124pp; English.

Examples; page 53-55, 124pp; English.

The amino acid sequence of the human auxillary cytochrome P450 species 2A6 variant 1. This variant contains a variation at residue 476. And to Lys, caused by a variation at base 1427. G to A in the DNA sequence. The CDNA was amplified by PCR using the primers (87751-4. The product was cloned into the yeast expression vectors pAAH5N or pAHRR to produce the vectors p2A6 variant 1 for the expression of the cytochrome P450 alone or p2A6R variant 1 for the expression with the yeast NADPH-P450 reductase. The vectors are used in a method for evaluating the safety of a chemical compound by reacting the chemical compound with recombinantly produced human cytochrome P450 molecular species 1A2 (087714), 2C9 (087715), 2E1 (087716), or 3A4 (087718), or their auxillary species and variants of cellextracts, and analysing the resulting metabolite to assess the safety of the chemical compound, or its metabolite, will be converted into a carcinogenic or mutagenic form through metabolism in the liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            11-0cr-1996 (first entry)

Novel method for the evaluation of the safety of a cpd. - using a human cytochrome P450 and yeast NaDPH reductase to determine whether PT human cytochrome P450 and yeast NaDPH reductase to determine whether PT the analyte cpd. is detoxified or metabolised to a carcinogen Example 1; Page 33-35; 74pp; Japanese CC This is the amino acid sequence of the human cytochrome P450 molecular cospecies 2A6 variant #1 protein. The corresp, gene was amplified from a human liver derived cDNA library as 2 fragments of 0.6 and 0.9 kb using primers 126941-44. The prod. was cloned into the yeast expression vector primers 126941-44. The prod. was cloned into the yeast expression vector copadisk to generate plasmid p2A6 for prodn. of the cytochrome only or into the vector paner to generate the plasmid p2A6R for co-prodn. with the cyeast NADPH-P450 reductase. The sequence is placed under control of the cyeast Abh gene promoter and terminator.

CT he vectors are used in a method for evaluating the safety of a cpd. by creacting the test cpd. with recombinantly produced human cytochrome P450 conting the test cpd. with recombinantly produced human cytochrome P450 conting the test cpd. with recombinantly produced human cytochrome P450 conting the test cpd. with recombinantly produced human cytochrome P450 conting the test cpd. with recombinantly produced human cytochrome P450 conting the as a fused protein or as a coll extract) and analysing the central rendered carcinogenic or "unsafe" if it is not detoxified or is metabolised to a carcinogenic cpd. "is considered "safe" if it is not detoxified or is Sequence 494 AA;

Human derived cytochrome, P4502A6.
Human derived cytochrome, P4502A6; commercial cDNA library; yeast;
transfection; recombinant production; expression vector; mammal;
immunisation; sensitisation; antibody; determination; detection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antibody recognising human derived cytochrome P4502A6 - allows specific detection of cytochrome P450 species in humans S Example 1. Pages 11-13; 13pp; Japenese.

The present sequence is the human derived cytochrome (HDC) P4502A6, which was obtd. from a commercial cDNA library. Yeast C were transfected with an expression vector confg. the HDC cDNA, cultured and then disrupted to give a microsomal fraction. The HDC was purified from the fraction, and used to immunise and ansientiese a mammal. Blood was drawn from the mammal, and an anti-HDC antibody isolated The antibody obtd. recognises HDC P4502A6, partic. at a serum dilution rate of 1:10000, and is substantially without cross reaction to other HDC P450 spp..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

The terminal differentiation of keratinocytes, this protein
If During the terminal differentiation of keratinocytes, this protein
from the cytosol becomes cross-linked to membrane proteins by
transglutaminase and incorporated into an insoluble, cross-linked
envelope under the plasma membrane.
envelope under the plasma membrane.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FUNCTION: INVOLUCRIN IS A KERATINOCYTE PROTEIN THAT FIRST APPEARS IN THE CELL CYTOSOL, BUT ULTIMATELY BECOMES CROSS-LINKED TO MEMBRANE PROTEINS BY TENNSCLUTAMINASE. ALL THAT RESULTS IN THE FORMATION OF AN INSOLUBLE ENVELOPE BENEATH THE PLASMA MEMBRANE. -! TISSUE SPECIFICITY: PRESENT IN KERATINOCYTES OF EPIDERMIS AND CHER STRATITED SQUAMOUS EPITHELIA.

Mark encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 1; Page 61; 183Pp; Japanese.

Claim 1; Page 61; 183Pp; Japanese.

Claim 1; Page 61; 183Pp; Japanese.

The sequences given in R99921-23 and R99926 represent fragments of the osteoclastogenesis inhibitory factor (OCIF) of the invention. The OCIF has a molecular weight by SDS-PARG of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g. osteoporosis.
                                              22-APR-1997 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          for bone resorption control, esp. treatment of osteoporosis
Claim 56; Page 113-114; 183pp; Japanese.
This Sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This Sequence represents OCIF-DDDI in which amino acids 178-252 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of OK Dunder reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto action-exchangers or heparin and its activity is lowered after 10 mins at 70 deg. C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ó

This sequence resorption control, esp. treatment of osteoporosis for bone resorption control, esp. treatment of osteoporosis for bone resorption control, esp. treatment of osteoporosis.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (oofF) of the invention. This sequence represents OCIF-DDD2 in which amino acids 253-326 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the control of the poor resorption and therefore in the control of bone resorption of incorrection and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               N. Four, Journal osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis foatment of osteoporosis.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-DCR4 in which amino acids 123-164 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Osteoclastogenesis inhibitory factor; OCIF; heparin; bone resorption; osteoporosis.

DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis (Claim 47) Page 107-109; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-DCR2 in which amino acids 43.84 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. or 30 mins at 56 deg.C, and is lost after 10 mins at 40 deg.C. OCIF is useful in the control of bone resorption and therefore in the control of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         23-APR-1997 (first entry)

DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 50. Page 109-111, 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-DCR3 in which amino acids 85-122 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the control of disorders of bone resorption, e.g.
                                                                                                                                           Na rabb, 1931,09.

Na encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 44; Page 105-107; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-DCR1 in which amino acids 2-42 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.

                                                                                                                                    22-APR-1997 (first entry)
Mature osteoclastogenesis inhibitory factor.
Osteoclastogenesis inhibitory factor; OCIF; heparin; bone resorption;
                                                                                                                                                                                                                                                                                                                                                The encoding osteoclastogenesis inhibitory factor protein - useful for hone resorption control, esp. treatment of osteoporosis of the hone resorption control, esp. treatment of osteoporosis.

This sequence represents the mature osteoclastogenesis inhibitory factor (OCIF) of the invention. The OCIF has a molecular weight by SDS-RAGE of 60 kb under reducing conditions and 120 kb under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or useful in the control of bone resorption and therefore in the transfer of the protein of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Osteoclastogenesis inhibitory factor; OCIF; heparin; bone resorption; osteoporosis.

DNA encoding osteoclastogenesis inhibitory factor protein - useful

for bone resorption control, esp. treatment of osteoporosis

Claim 80; Page 126:128; 183pp; Japanesse.

This sequence represents a mutated version of the full length

osteoclastogenesis inhibitory factor (OCIF) of the invention. This

sequence represents a mutated version of the invention. This

sequence represents to the factor (OCIF) of the invention of the invention. This

center and amino acids 373:380 of the mature OCIF protein are deleted.

These changes are caused by the introduction of a restriction site in

the DNA encoding this protein. The OCIF of the invention has a

molecular weight by SDS-PAGE of 60 kD under reducing conditions

and 120 kD under non-reducing conditions. The protein is adsorbed onto

cation-exchangers or heparin and its activity is lowered after 10 mins

at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90

deg.C. OCIF is useful in the control of bone resorption and therefore

in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         No. According osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 62. Page 117-119; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-CL in which amino acids 379-380 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

On bone resorption control, esp. treatment of osteoporosis for bone resorption control, esp. treatment of osteoporosis folialm 38. Page 100-102, 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-C22S in which the 27nd Gys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg. C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  22-APR-1997 (first entry)

For bone resorption control, esp. treatment of osteoporosis

Claim 41: Page 103-105; 183pp; Japanese.

This sequence represents a mutated version of the full length

Steoporosis inhibitory factor (OCTF) of the invention. This

sequence represents OCTF-C235 in which the 23rd Cys residue in the

mature OCTF protein is substituted by Ser. The OCTF of the invention

chas a molecular weight by SDS-PAGE of 60 kD under reducing conditions
and 120 kD under non-reducing conditions. The protein is adsorbed onto

cation-exchangers or heparin and its activity is lowered after 10 mins

and 120 kD under non-reducing conditions. The protein is adsorbed onto

cation-exchangers or heparin and its activity is lowered after 10 mins

and 0.0 CTF is useful in the control of bone resorption and therefore

in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                         This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents oCIF-C20S in which the 20th Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A 13 R99935 standard; Protein; 401 AA. R89935. 22-APR-1997 (first entry) Mutated OCIF, OCIF. OCIF-C23S. OSteoclastogenesis inhibitory factor; OCIF; heparin; bone resorption; osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

NA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim [29]; Page 94-96; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-C195 in which the 19th Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                       22-AFR-1997 (first entry)
Mutated OCIF, OCIF-C19S.

This sequence represents the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. The OCIF has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.

Comparative amino acid sequence analysis of Thermotoga
maritima Beta-glucosidase BglA deduced from the nucleotide
sequence of its gene indicates distant relationship between
family BGA Beta-glucosidases and other families of Beta-1
4-glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
